Projects

Insurance Claims Center

- Client is a major holding company with \$50B in assets.
- Updating legacy claims software of recent insurance acquisition from Delphi to .Net Core Architecture.
- Part of a team of three, consulting remotely within client's development department of 12 developers.
- Designated Front End Developer personally responsible for majority of front end engineering including the UI/UX Design implementation, using C#, .Net MVC, JQuery, JavaScript, CSS, HTML, and Bootstrap.
- Participated in development of RESTful API aimed at supporting future updates to the legacy app.
- Project was built with C#, .Net Core, .Net MVC, KendoUI, JQuery, JavaScript, HTML, CSS, Bootstrap, SQL, and Dapper ORM.

nxtDoorChef | [github](#) | [live](#)

- CMS centered on connecting home chefs to those who want home cooking.
- We have built the front-end in React and the web-server in Node, with MySQL as the database.
- Member of a seven developer team, tasked with creating the node.js web-server, designing the SQL database, and project management.
- I employed JavaScript, Node.js, NPM, Express, Sequelize, and MySQL. The project is hosted on an Amazon aws server.

Orange You Glad Logic Puzzle | [github](#) | [live](#)

- A tool used to test an applicant's problem solving skills.
- The project demonstrates a full stack JS implementation, from the HTML5 and JS front end, to the Node.js API and MongoDB data storage.

Professional Experience

Associate Developer

Magenic Technologies

October 2017 - Present

- Requirements reviews, design reviews, estimating work, programming to specifications and guidelines, unit testing, and daily status reporting.
